Question

Find the unit vector along \mathbf{PQ} , where $P = (2, 1, -1)$ and $Q = (4, 4, -7)$.

Solution

Step 1: Vector \mathbf{PQ}

The given points are

$$P = \begin{pmatrix} 2 \\ 1 \\ -1 \end{pmatrix}, \quad Q = \begin{pmatrix} 4 \\ 4 \\ -7 \end{pmatrix}.$$

Hence,

$$\mathbf{PQ} = Q - P = \begin{pmatrix} 4 \\ 4 \\ -7 \end{pmatrix} - \begin{pmatrix} 2 \\ 1 \\ -1 \end{pmatrix} = \begin{pmatrix} 2 \\ 3 \\ -6 \end{pmatrix}. \quad (1)$$

Step 2: Magnitude of \mathbf{PQ}

$$\|\mathbf{PQ}\| = \sqrt{2^2 + 3^2 + (-6)^2} = \sqrt{4 + 9 + 36} = \sqrt{49} = 7. \quad (2)$$

Step 3: Unit vector along \mathbf{PQ}

The unit vector is

$$\mathbf{OA} = \frac{\mathbf{PQ}}{\|\mathbf{PQ}\|} = \frac{1}{7} \begin{pmatrix} 2 \\ 3 \\ -6 \end{pmatrix}. \quad (3)$$

Final Answer

$$\boxed{\mathbf{OA} = \frac{1}{7} \begin{pmatrix} 2 \\ 3 \\ -6 \end{pmatrix}}$$
